

Project Profile

Type: Retail

USSI provides technical support for a national provider of VSAT networks.

Project Overview:

Market Segment: Retail

Number of Sites: 75,000

*Contract Duration: November 2001
to present*

Project Scope:

USSI installs and provides technical support, maintenance and repair for a national provider of VSAT networks. The networks aid in the transmission of data from point of sale terminals and other retail communication devices.

Service Offering:

Services include troubleshooting, installation, and service of on-site equipment to ensure information is transmitted and received as required by the retailer's network.

Customer Overview:

The client is a pioneer in providing broadband satellite networks for a variety of customers including government, consumers, small business, and enterprise organizations. The company has facilities located in seventeen countries.

End User Overview:

The systems allow the end user to transmit and receive data for a multitude of industries including financial institutions, gas stations, department stores, and many others.

The Final Product:

What does the system do?

The earth station units range from .98 to 1.8 meter antennas. The equipment is used to transmit and receive customer data via the end user's equipment. The end user's system includes point of sale equipment and data transmission devices.

Summary:

The services provided are of the utmost importance to ensure all necessary data is transmitted real-time in a consistent and efficient manner.

About USSI:

USSI provides field maintenance and system integration for multiple technology markets including commercial communication systems, government weather, consumer sites, digital media and broadcast host locations.
